

Middle School Students at MEC Make S'mores

Who said Science isn't fun? The Middle School students are learning about elements, mixtures and compounds. What better way to mix science and fun by making S'mores?

Students learned about how temperature changes elements, and how certain elements maintain their form under different conditions.

Since we are doing remote learning, "experiments in the kitchen", this student shows the teacher his finished product. This picture will be used as evidence of the final product, before the product is eaten.

We will be conducting more remote learning science "experiments" over the next few weeks.
